

MICROSOL®

Without Boron

A special formulation for foliar spraying, drip and sprinkler application. Microsol without Boron contains a well balanced mixture of chelated micro-elements to suit the demands of most agricultural crops in soil and soil less culture

INORGANIC FERTILIZER

RECOMMENDATION FOR USE:

For the treatment of multiple trace element deficiencies in crops, Microsol without Boron will stimulate growth and optimize yields of crops growing under poor growing conditions in areas with deficiencies.

COMPOSITION OF TRACE ELEMENTS:

ELEMENT	COMPOSITION (%mm)
Iron	7.18
Manganese	3.57
Zinc	1.77
Copper	0.24
Molybdenum	0.18 (or 1,800 ppm)

DIRECTIONS FOR USE:

Dosage calculations are based on Iron (Fe) requirements. The other elements following suit of applications.

Apply 20 gm of Microsol without Boron per cubic meter of water to create a 1ppm iron (Fe) concentration in water.

DRIP APPLICATION

Sequential application

Soil Type	Rate per ha per application
Light soils	3 – 5 kg
Medium soils	5 – 7 kg
Heavy soils (calcerous)	7.5 – 10 kg

Repeat where necessary every 10-15 days.

Continuous (proportional) application

Apply 15 – 30 gm per cubic of irrigation water

FOLIAR APPLICATION:

Microsol can be used as a foliar spray. Consult your local agent or agronomist for the recommendation for use.

MIXING WITH WATER:

For drip irrigation with other fertilizers:

To supply 1 – 1.5 ppm of iron concentration in irrigation water that fits most crops, dissolve 20 – 30 gm of Microsol with every 1 kg of other soluble fertilizers.

For foliar application:

Do not premix. Add slowly to the main bulk of water while agitating.

COMPATIBILITY:

Microsol without Boron is specially formulated and produced under the EEC requirement for fertilizers and chemicals. It is recommended for use with fully soluble fertilizers. It is also compatible with many pesticides.

PRECAUTIONS:

Wash hands after use. Keep away from children. Store in original package tightly closed in a dry safe place.
