VERSIGTIG

TRONIC is 'n bevorderingsmiddel en bestaan uit 'n kombinasie van anioniese, nie-ioniese en kationiese komponente.

TRONIC verenig die anioniese eienskappe van benatting en verspreiding, die nie-ioniese uitwerking op mengbaarheid en kutikulêre penetrasie met die aktiverings- en behoudingsvermoë van die kationiese bestanddeel om 'n meerdoelige byvoegmiddel te produseer.

TRONIC verbeter die algehele opname van sistemiese onkruidodders en swamdoders, en die egalige verspreiding en behouding van spuitmateriaal op die blaaroppervlakte.

TRONIC verminder skuimvorming van meeste onkruidodders in die spuittenk.
